

Cialis once-daily version isn't great

The addition feature of once daily version of cialis will distinguishes it from other Ed drugs. Lilly decided to start beginning the once-daily version in certain European countries almost in the second half of 2007.

As we know that cialis is one of the winner drug for the erectile dysfunction. The fact is that erectile dysfunction can be things of the history with the involvement of drug called as Cialis. Erectile Dysfunction is really the mania to be 'worried of' in men's life but Ed drugs are the best hope to cure erectile dysfunction. It has been found that European officials have approved a once-daily version of impotence pill Cialis.

According to Drug maker "the approval of this drug from the European Commission meant Cialis is the first impotence medicine that has been passed for continuous use."

The main point to be converse here is that Lilly decided to start beginning the once-daily version in certain European countries almost in the second half of 2007.

As cialis has produced a great sale of \$266 million in the first quarter of 2007 and this is 19% above on a year earlier. Cialis is really mounting its popularity. Due to this success a new dose of cialis has been formulated. The advantage of this thing is that it eliminates the worry to plan the sex in limited period of time.

As this lower dose remove the time bound will really liked by the men get conscious due to time bound and does not seems to be satisfied. It mostly aimed at men who anticipate sexual activity at least twice a week.

Since cialis features are already eminent from other erectile dysfunction drugs and this addition feature help it to give distinguish it from other ed drugs.

Since it has been a fact that erectile dysfunction can be due both to psychological and physical factors. Proper consideration should be taken on both of them. This version will definitely give men a mental relief.
